Summary

Dynamic System Engineer with strong experience at Tata Consultancy Services, specializing in AWS, distributed data pipelines, ETL workflow optimization, and cloud cost reduction. Skilled in Python, SQL, and modern frameworks with hands-on experience in building scalable backend systems, microservices, and ML solutions. Delivered measurable improvements in data accuracy, system efficiency, and cloud expenditure.

Skills

- Programming: Python, Java, Dart, C, JavaScript
- Frameworks: React, Django, FastAPI, TensorFlow, Pandas, NumPy, PySpark, Matplotlib
- Databases: SQL, PostgreSQL
- System Design: AWS, Microservices, ETL pipelines

Experience

System Engineer, TATA CONSULTANCY SERVICES (Present)

- Engineered and optimized large-scale ETL pipelines across AWS services (Glue, Lambda, Redshift, S3, Aurora), processing 125M+ HCP records.
- Built scalable analytics workflows using Python, PySpark, Pandas, SQL.
- Implemented cost optimization reducing AWS billing by 10% (~₹1 lakh).
- Developed internal portals using Django and Flask APIs.

AI/ML Engineer Intern, Silver Touch Technologies Ltd. (June 2024 – July 2024)

- Developed image-processing based foul detection model for autonomous driving assessments.
- Built ML pipelines to enhance prediction accuracy.

Software Developer Intern, Silver Touch Technologies Ltd. (January 2024 – June 2024)

- Developed software features using Java and Python.
- Troubleshoot and enhanced application performance.
- Worked with Spring Boot, Odoo, Flutter, AI/ML.
- Collaborated on planning and execution strategies.

Education

Bachelor of Engineering, Information Technology

CGPA: 8.65/10

Government Engineering College Gandhinagar

12th Science – I.M.J Sarvavidhyalay, Balol

Percentage: 82.67%

Projects

Scalable Real-Time Chat App [Link](#)

FastAPI, React, Tailwind CSS, WebSockets

- Developed scalable real-time chat applications leveraging WebSocket and streaming protocols. Built modern, responsive UIs with React and Tailwind CSS, and implemented efficient backend communication using FastAPI.

Trust Management System [Link](#)

Django, Tailwind, PostgreSQL, Stripe

- Developing a role-based platform for trust operations, donations, expenses, and member management.
- Implemented admin-controlled approval workflows, permissions, notices, and internal communication features.
- Built analytics-ready admin dashboard for schemes, income tracking, and downloadable report

Plant Disease Classification [Link](#)

CNN, TensorFlow, FastAPI, JS

- Built a CNN-based deep learning model using TensorFlow and Keras to predict plant diseases from leaf images, applying data augmentation techniques to reduce overfitting.

Time-Series Dengue Forecasting [Link](#)

LSTM, TensorFlow, Python

- Developed an LSTM-based dengue forecasting model using TensorFlow, Pandas, NumPy, and Matplotlib to predict yearly dengue cases. With hyperparameter tuning and evaluation metrics to improve prediction accuracy.

Certification:

- AWS Certified Solutions Architect - Associate
